Question **6**

Not yet answered

Marked out of 9.00

The Library Management System (LMS) is designed to facilitate the management of library operations, including book cataloging, member registration, book borrowing/returning, and overdue fine calculation. The system should be user-friendly, accessible via web and mobile devices, and support integration with third-party digital resources.

A:

- Members should be able to borrow and return [books].
- The system should set due dates for borrowed [books] and track overdue [books].
- Automated reminders should be sent for due and overdue [books].

B:

- The system should automatically calculate overdue fines.
- Members should be able to pay fines online.
- Admins should have access to fine reports and payment records.

C:

- The system should generate reports on book usage, overdue [books], and member activity.
- Admins should be able to export reports in multiple formats.
- The system should provide insights into book popularity and library performance

D:

- The system should handle at least 500 transactions per second.
- Response time for any action should not exceed 2 seconds.

E:

- User data should be encrypted at rest and in transit.
- Two-factor authentication should be required for admins.
- The system should log all access and modifications.

F:

- The system should have an intuitive UI for all user roles.
- Mobile responsiveness should be ensured.
- User onboarding should include interactive guides.

A: [   ]
B: [   ]
C: [   ]
D: [   ]
E: [   ]
F: [   ]

Security Requirements	Compatibility Requirements	Fine Management
Reports and Analytics	User Roles	System Features

Suppose that you have the following dataset. In this task you're going to analyze categorical variables, namely standard error, adjusted SE, 95% CI and 95% adjusted CI and also design effect ratio. Please read carefully attached methodology and by using Python find an answer for the following questions:

Age Group	n	Estimated Proportion	Standard Error	Adjusted SE (Clustering)
18-24	☐☐☐	☐☐☐☐☐	☐☐☐☐☐	☐☐☐☐
55-64	☐☐☐	☐☐☐☐☐	☐☐☐☐	☐☐☐☐

Age Group	95% CI		95% CI (Adjusted)		Design Effect
18-24	☐☐☐☐ and	☐☐☐☐☐	☐☐☐☐ and	☐☐ ☐☐	☐☐☐☐
55-64	☐☐☐☐ and	☐☐☐☐☐	☐☐☐☐ and	☐☐ ☐☐	☐☐☐☐

☐1 ☐2 ☐3 ☐4 ☐5 ☐6 ☐7 ☐8 ☐9 ☐0 ☐,

In this question you can see 1 code example that incorporate different naming conventions. Please match variables' name with correct naming conventions.

private String strCustomerName; ☐

public Customer(int customerID, String customerName, String email) ☐

public String getEmail() { return strEmail; } ☐

private String strSKU; ☐

private Product prodItem; ☐

public void AddOrderItem(OrderItem orderItem) ☐

private String strOTP; ☐

☐ Pascal ☐ Hungarian ☐ Acronym

Question **9**

Not yet answered

Marked out of 9.00

This question is related to Software Testing. Please read carefully attached document, and define correct Test case type.

A

Choose...

B

Choose...

class TestOrder

Choose...

def test_order_under_repeated_processing

Choose...

Question **10**

In attached document you will have 2 examples of written codes. Please read carefully, if it is necessary you can run a code and specify for each case (bug problem or Ok case).

A   Choose...

B   Choose...

C   Choose...

D   Choose...

E   Choose...

F   Choose...

G   Choose...

H   Choose...
